

Estimation of 3-Month Lead Averages

Updated 10/18/12

Data Handling Caveats:

Only "creditable" samples used in the calculation of the monthly average.

Lead data should be reported using 4 significant figures w/ truncation to 4th significant figure.

For previous NAAQS, all digits are retained in calculations until the end. This convention was used here, but it is uncertain what the current lead convention is.

The 3-month mean is rounded to nearest hundredth, and compared to 0.15 ug/m³.

Units in ug/m³

50% NAAQS: **0.075 ug/m³**

(50% NAAQS = keep monitoring)

* POC 2 not for comparison to NAAQS

monitor type:		source-oriented		source-oriented		pilot project site		NCORE		NCORE		NATTS		NATTS precision		source-oriented		source-oriented
